# EXPERIMENT 1 & 2

## PERFORM WEBSITE, EMAIL, WHOIS, DNS, AND NETWORK FOOTPRINTING ON THE TARGET NETWORK USING SEARCH ENGINES, WEB SERVICES, AND SOCIAL NETWORKING SITES

**AIM:**

To perform passive website, email, WHOIS, DNS, technology, subdomain, and social-media footprinting of an authorized target domain using search engines and public web services.

**PROCEDURE:**

1. Select an authorized target domain.
2. Use Google with the **site: operator** to identify indexed web pages.
3. Search for publicly available documents using the **filetype: operator**.
4. Search for login pages using the **inurl:login** operator.
5. Perform a **WHOIS lookup** to collect domain registration details.
6. Perform a **DNS lookup** to obtain A, MX, NS, and TXT records.
7. Use **BuiltWith** to identify the technologies used by the website.
8. Use **crt.sh** to discover publicly available subdomains and search social networking sites for organizational information.
9. Record all collected information in an observation table
10. Summarize the results of the passive footprinting experiment.

**OBSERVATION TABLE:**

**RESULT:**

Footprinting of the authorized college website, rajalakshmi.org, was successfully completed using Google Search, WHOIS lookup, BuiltWith, crt.sh, and public web services. Publicly available information such as indexed pages, PDF files, domain registration details, website technologies, and subdomains was identified and documented. The activity was performed passively without scanning, login attempts, or access to private data.
